Contents	vii
List of Tables	xv
List of Figures	xvii
List of Algorithms	xix
Preface	xxi
1 Introduction	1
1.1 Overview and Supporting Motivation	1
1.2 Background Assumed	4
1.3 Projects	5
1.4 Endnote	6
1.5 On Indices	6
2 The basic computational object	
<i>The idea of Number</i>	7
2.1 The importance of Number	7
2.2 Types of number and their use	16
Representations for $p \in \mathbb{Q}$	18
2.3 Beyond Rationality: the class of Real numbers	21
2.4 Polynomial forms and roots	24
2.5 Operations involving Polynomials	29
Polynomial Addition and Scalar Multiplication	30
Polynomial Multiplication	30
Polynomial Division	33
Factorization and Roots	37
Special cases: closed form solutions	43

2.6	A brief note on Multivariate Polynomials	45
2.7	Summary	47
2.8	Projects	48
2.9	Endnotes	49
3	Creating order	
	<i>Vectors and Matrices</i>	57
3.1	Imposing structure on collections of objects	57
3.2	n -vectors vs. n -tuples	59
3.3	Operations involving vectors	62
3.4	Vector spaces: Dimension & Independence	76
3.5	A first look at Matrix Algebra	83
3.6	Linear (and non-linear) Transformations	90
	Linear Transformations	92
	Affine Transformations	97
	A Brief Note on Projection and Perspective	99
3.7	Application to Computer Graphics and Animation	99
3.8	Summary	109
3.9	Projects	110
3.10	Endnotes	111
4	The world in motion	
	<i>A Basic Introduction to Calculus</i>	117
4.1	The origins of Differential Calculus	117
4.2	Functions, Lines and Derivatives	123
4.3	Standard differentiation rules	136
4.4	Turning Points and the Second Derivative Test	139
	Some Examples of Using the Second Derivative Test	142
4.5	Differential Calculus and Optimization	144
4.6	Digging out roots using Derivatives	152
	Classifying root finding methods	154
	Halley's Method for Finding Roots	155
	Laguerre's Method for Polynomial Roots	156
	Example Comparison of the Two Methods – Polynomial Roots	157
	Summary of Root Finding Techniques	160
4.7	Dealing with several variables	161
	3 or more variables	168
	2 variable optimization example – Management Avarice	169
4.8	Summary of Differential Calculus in CS	173

4.9	Overview of Integral Calculus	174
4.10	Standard integration rules	180
4.11	Summary	184
4.12	Projects	185
4.13	Endnotes	186
5	An unorthodox view of number	
	<i>Complex Numbers</i>	191
5.1	Introductory Comments	191
5.2	Historical origins: “awkward polynomials”	194
5.3	Basic properties and operations	198
	Complex Addition and Scalar Multiplication	199
	Complex Multiplication	199
	Complex Division	200
5.4	A multiplicity of forms	202
	Matrix Form	202
	Argand diagrams	202
	Polar Coordinates	203
	Exponent (Euler) form	205
	Summary of different schemes	207
5.5	Complex Numbers and powers	208
5.6	Primitive roots of Unity	211
5.7	Summary of Complex Power Operations	214
5.8	A selection of computational uses	214
	Laguerre’s Method Redux	214
	Quaternions	216
	Properties of typical structures	221
	The Discrete Fourier Transform and its use	224
	Important Computational Properties of the DFT	228
	Inverse Transform	228
	The Convolution Property	230
	DFT and Image Compression	231
	DFT and Large number Arithmetic.	233
	The Cooley-Tukey Fast DFT Algorithm	241
	Music through chaos	246
	Fractals, Computer Art and \mathbb{C}	247
	From \mathbb{C} to Fractal Sets	249
	Voss’ $1/f$ -music Algorithm	252
5.9	Summary	254

5.10	Projects	257
5.11	Endnotes	258

6 Computing as experiment

	Statistics and Data Analysis	263
6.1	Probability theory v. statistics: differences	263
6.2	Classical scientific experimental method	268
6.3	It's not about "machines": artefact & algorithm	271
6.4	Basic statistical concepts	274
	Population and distribution	274
	Random variables	278
	Expectation, mode & median	281
	Expected Value of a random variable	281
	Independence & Conditional Probability	284
	Independent events	286
	Dependent Events	286
	Variance & standard deviation	287
	Probability distributions as "area under a curve"	287
6.5	Adjustment to "Pure" Standard Deviation	294
6.6	The Normal and some discrete distributions	298
	The Normal Distribution $\mathcal{N}(\mu, \sigma^2)$	298
	The Binomial Distribution	299
	The Geometric Distribution	300
	The Poisson Distribution	301
	Summary of Discrete Probability Distributions	302
6.7	Moments and their application	303
6.8	Confidence and hypothesis testing	306
	Comparing two samples – Welch's Test	312
6.9	Statistical fallacies and misuse	314
	Bigger is not the same as better: large vs. small	314
	<i>Post hoc ergo propter hoc</i> and Causality fallacies	316
	Outlier effects	317
	Reading too much into results: overgeneralizing	318
	Proving the Null Hypothesis	319
6.10	Selected example cases	319
	Constant Factors in Quicksort Implementations	320
	Exam strategy and the Geometric Distribution	322
	Web-page "Hits"	324
	Poisson with Small Data sets	327

Exam standards Comparison	328
6.11 Statistics & CS – Summary	330
6.12 Finding a fit: Interpolation and Extrapolation	331
Underlying aims of interpolation	331
Overview	332
Regression and Residuals	334
Least Squares approaches	335
Derivation of Least Squares Approximation	337
Fitting a line: Linear Regression	339
Selected Non-linear models	344
Fitting a curve: Polynomial Interpolation	350
Quadratic Regression	353
How good a fit is it?	355
Pearson’s Correlation Coefficient	358
Spearman’s Rank Correlation	360
6.13 Example Regression & Correlation Cases	364
Binary Tree Depths	364
Zipf’s Law in Text Analysis	366
6.14 Summary	370
6.15 Projects	371
6.16 Endnotes	372
7 Matrices revisited	
<i>Introduction to Spectral Methods</i>	373
7.1 Operations on $n \times n$ -matrices	374
7.2 Inverse Matrices and the Determinant	374
Computing $\det \mathbf{A}$	376
Example 3×3 determinant	378
Matrix Inverse	379
Triangular Matrices	380
The determinant as a sum of permutations	381
7.3 Matrix Rank and the relationship to singularity	382
Elementary row operations	384
7.4 Introduction to Spectral Analysis	387
The concept of eigenvalue & eigenvector	388
The determinant as polynomial	391
Properties of eigenvalues	393
The Perron-Frobenius Theorem	398
7.5 Computing Eigenvalues and Eigenvectors	402

Overview of the Power Method	403
The Rayleigh Quotient	406
Finding other eigenvalues and eigenvectors	407
Inverse Power Method	407
Deflation	409
Special Case: Symmetric Matrices	413
Summary	415
7.6 Applications of spectral methods in Computing	416
The Google Page Rank Algorithm	416
The web as a large graph	419
Dead-ends & Dangling Pages	429
Summary	434
Matrices and their Singular Value Decomposition	435
Underlying form of Singular Value Decomposition	435
Image Compression through SVD	438
Summary	441
Computational Argument	442
Spectral methods to check instability	449
Conditions that guarantee “good behaviour”	449
Summary – Spectral methods and Argument	450
7.7 Summary – Matrix and Spectral Methods in CS	450
7.8 Projects	452
7.9 Endnotes	453
8 Epilogue	457
8.1 Introductory Remarks	457
8.2 Significance and Prospects	458
Numbers & Polynomials	460
Vectors, Matrices and Graphics	462
Calculus & Computer Science	463
Complex Analysis and its Importance in CS	465
Statistical Methods: Computing is Empirical	466
Matrices, Spectral Methods and CS	468
8.3 Lacunae	469
8.4 Conclusion – Some Personal Observations	471
Bibliography	475
List of Symbols	495

<i>CONTENTS</i>	xiii
Main Index	497
Index of Names	503
