

# COMP283 Assignment One - Scenario Three

## The Volunteer Organisation

“Liverpool Helps” is a volunteering organisation. Individuals can join the organisation and through it, offer their assistance to individuals and groups on Merseyside that need help (usually in the form of man-power or expertise in certain specialist areas).

It maintains a list of events (such as a 5km walk for charity) and individual volunteers can sign up to attend them.

You have started working for Liverpool Helps and have been tasked with developing a database system to maintain information regarding the events and the volunteers who take part. Your database should at least be able to:

- List the current events and the number of people who have signed up to them.

- List volunteers who have taken part in events of a particular kind in the past (so that they can be notified of an upcoming event that might interest them).
