

COMP283 Assignment Two - Scenario Three part Two

The Volunteer Organisation

“Liverpool Helps” is a volunteering organisation. Individuals can join the organisation and through it, offer their assistance to individuals and groups on Merseyside that need help (usually in the form of man-power or expertise in certain specialist areas).

Charitable funding, which until now has kept the organisation going (paying for staff & building costs etc.) has dried up and so the organisation has been looking for sponsorship - for events and for the organisation itself. In order to support this you must modify your database design to include details of sponsors (including contact names etc.), sponsorship income, event costs etc. You must be able to produce reports to send to sponsors to show how their money was spent e.g. several sponsors may pay towards a single event or a single sponsor might pay for multiple events.
